

ABSTRACT OF THE DISCLOSURE

In a system, primary audio stream A0 and secondary
audio stream A1 are recorded on a write-once type
recording medium such as a DVD-R. The system comprises
5 first to third recording sections. The first recording
section is configured to record a first original audio
stream as stream A0 on the DVD-R. The second recording
section is configured to record a second original audio
stream as stream A1 on the DVD-R. The second original
10 audio stream is recordable independently of the first
original audio stream. The third recording section is
configured to record a modified audio stream as stream
A1 on the DVD-R. The modified audio stream is obtained
by partially or entirely modifying the second original
15 audio stream.
